

MLOps Overview

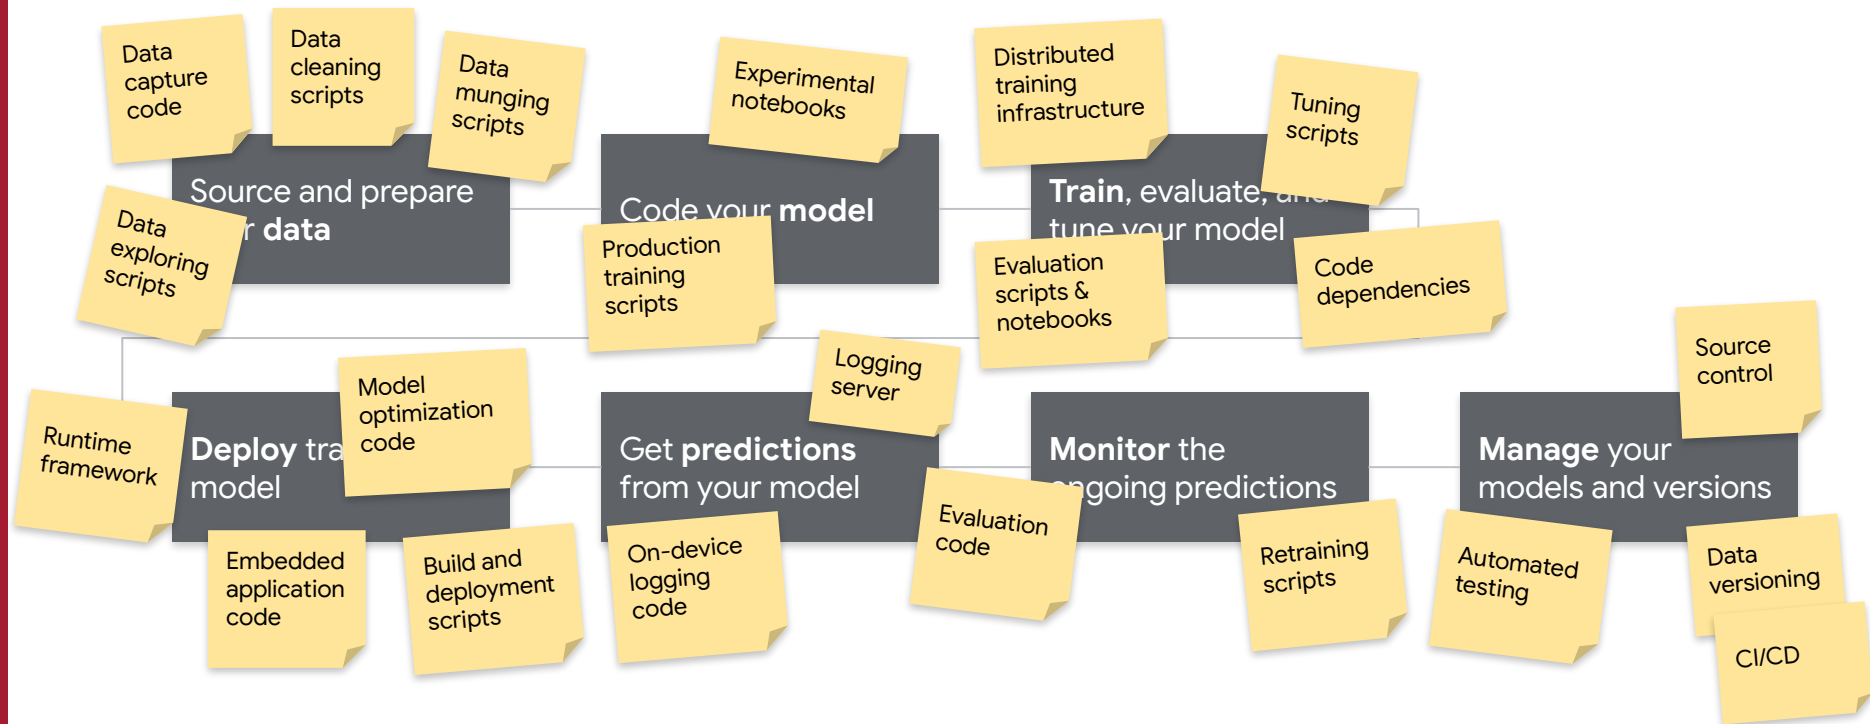

The Machine Learning Workflow

The Machine Learning Workflow

MLOps = ML Workflow + Automation

MLOps means...

5 Focus Areas

**Running
end-to-end**

**Managing
Complexity**

**Evaluating
Results**

**Improving
Models**

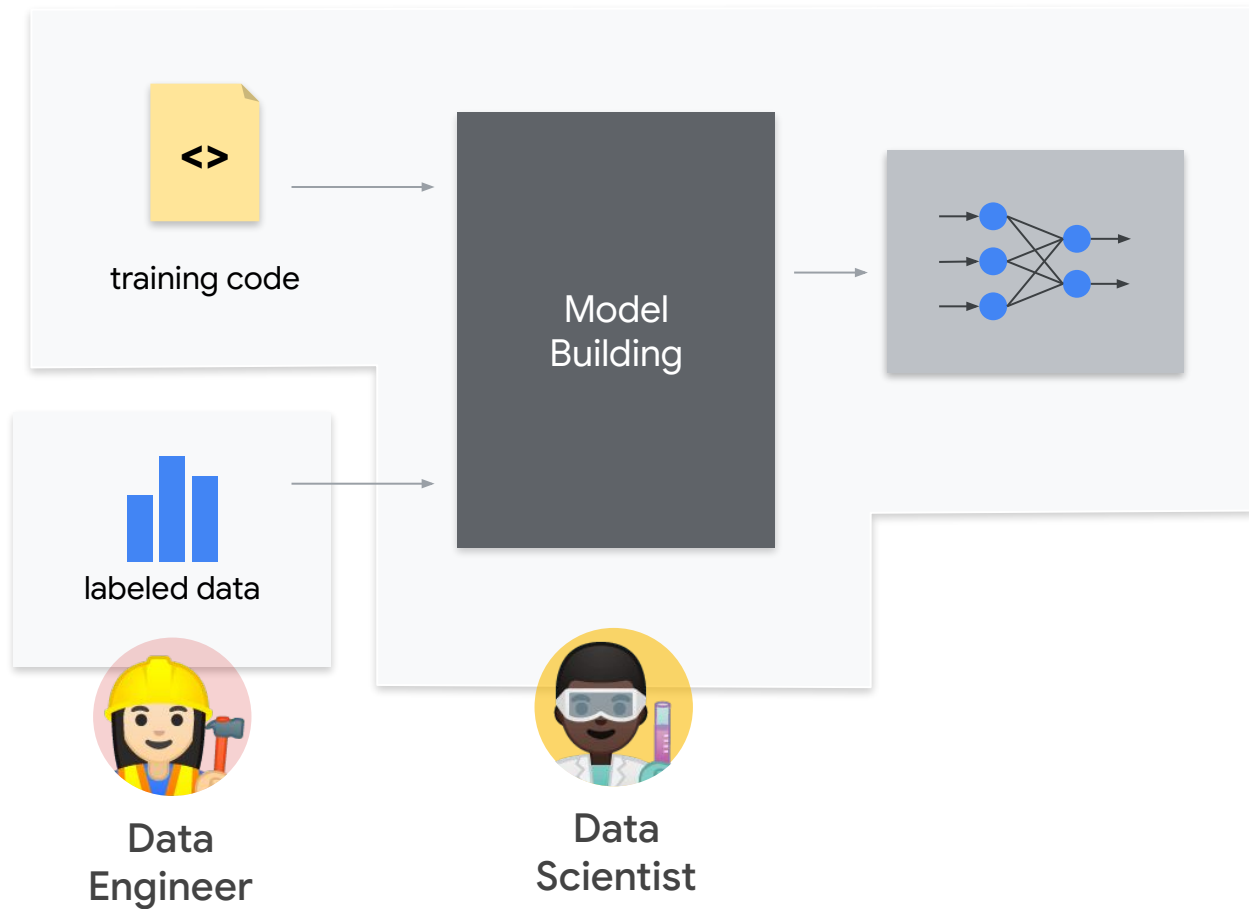

**Tracking
deployments**

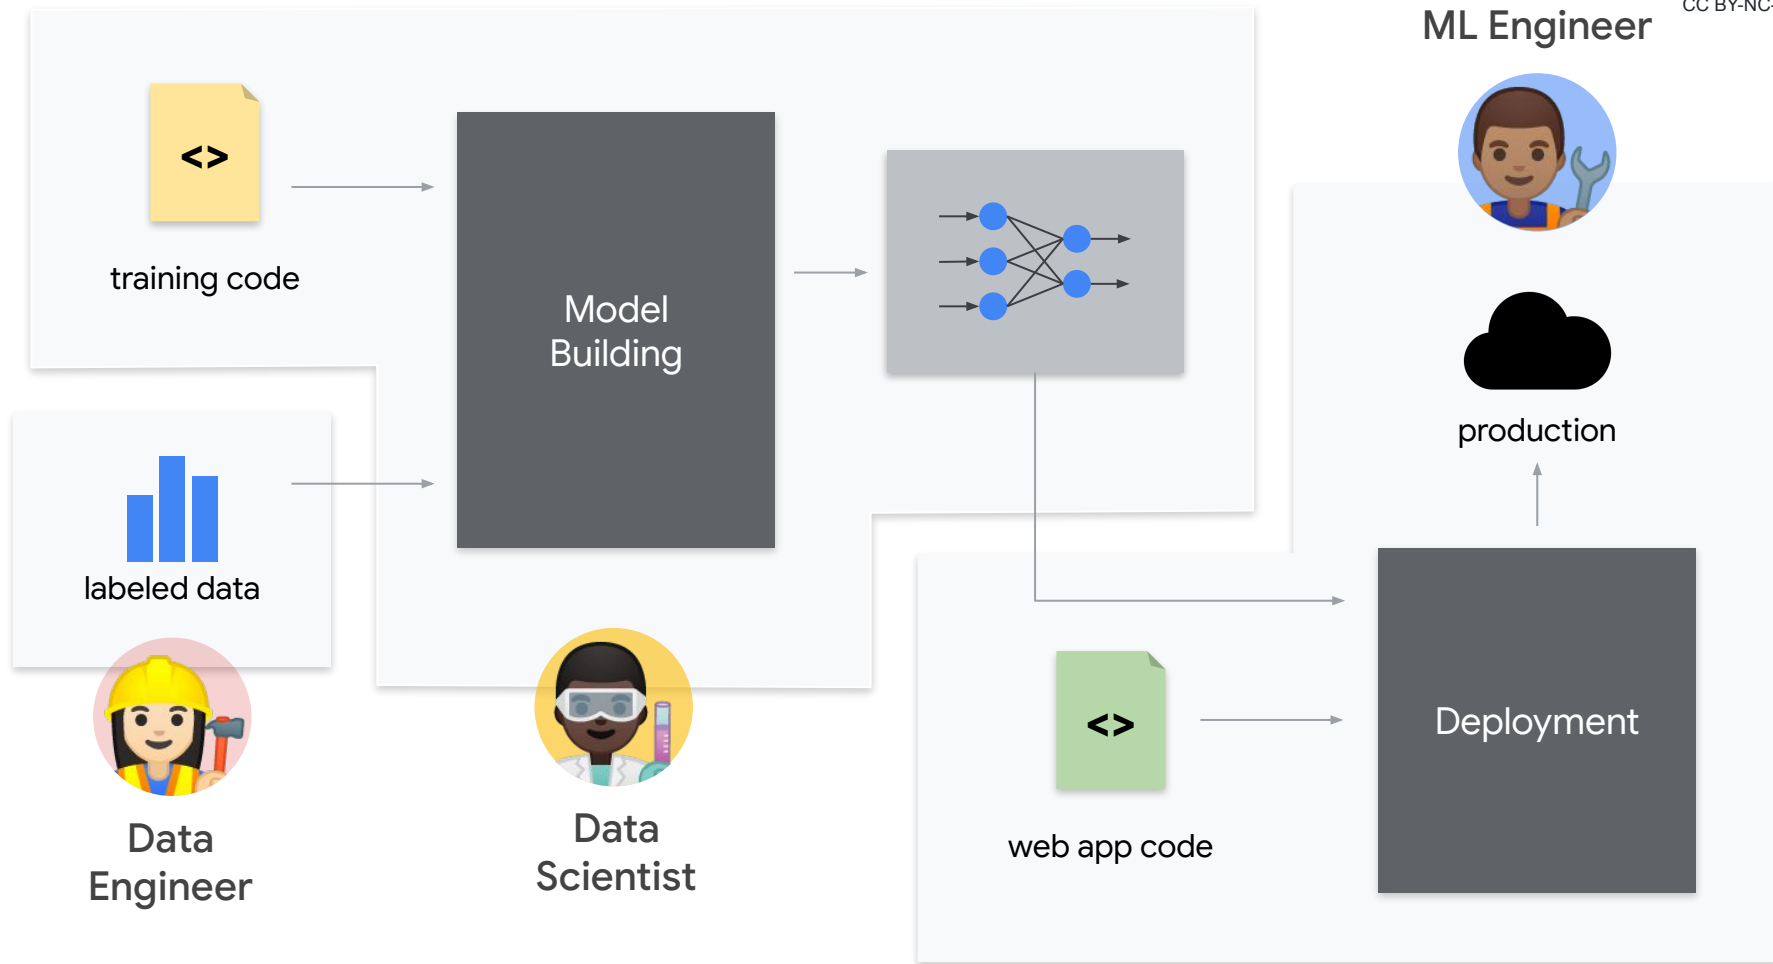

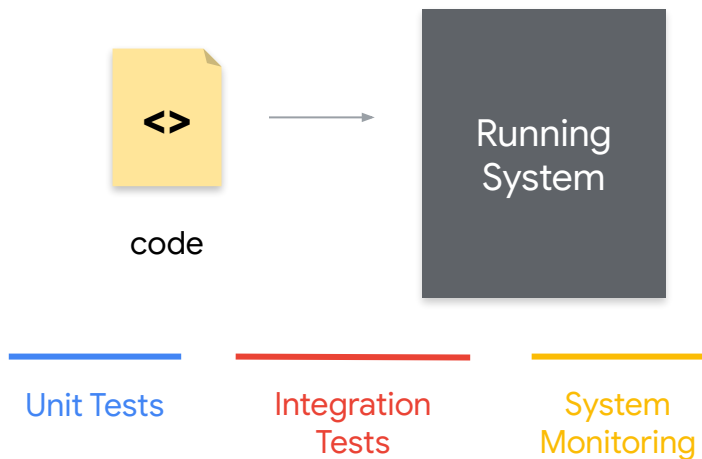

labeled data

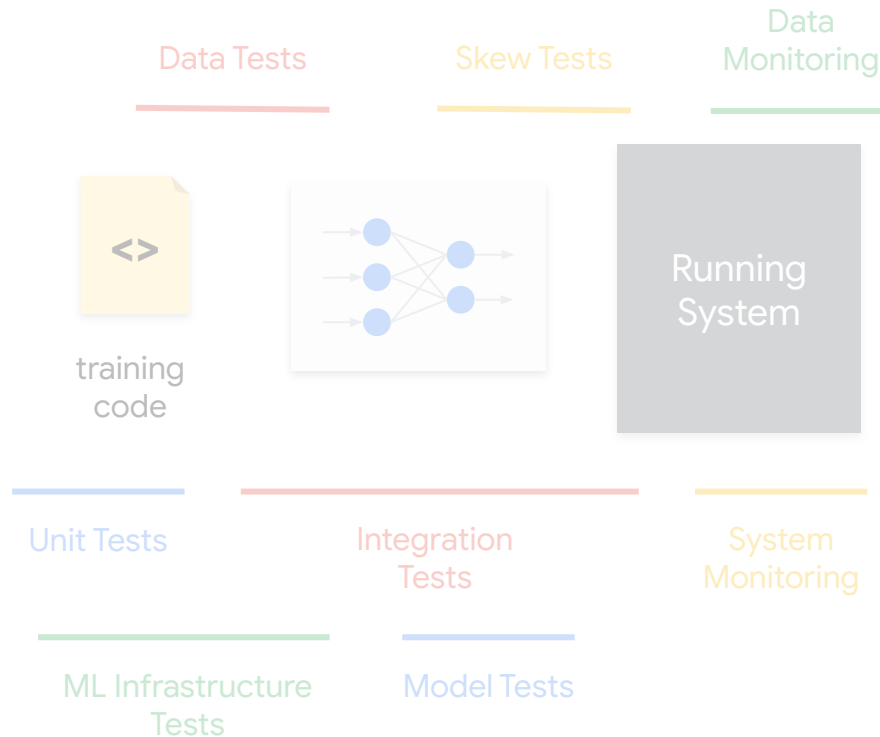

Data
Engineer

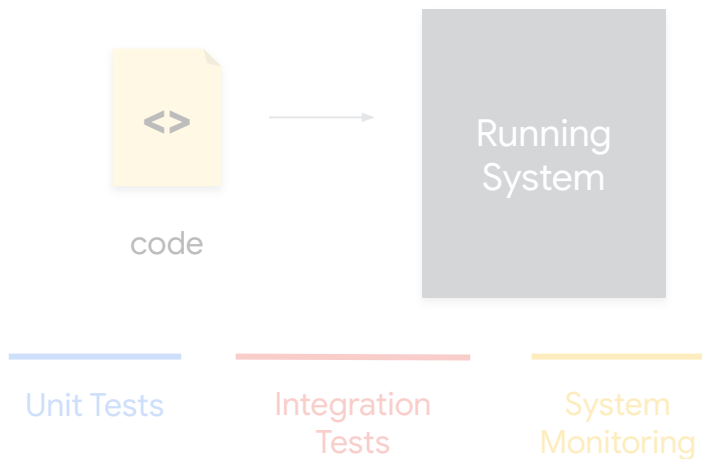

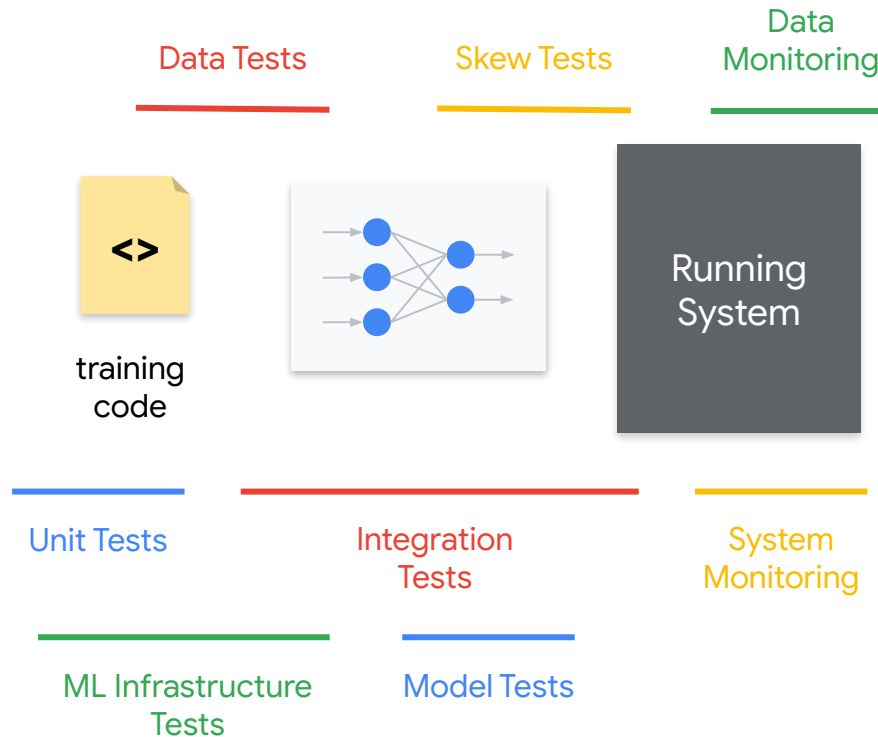

Traditional System Testing

ML-based System Testing

Traditional System Testing

ML-based System Testing

MLOps Tools

Custom
Scripts

Frameworks

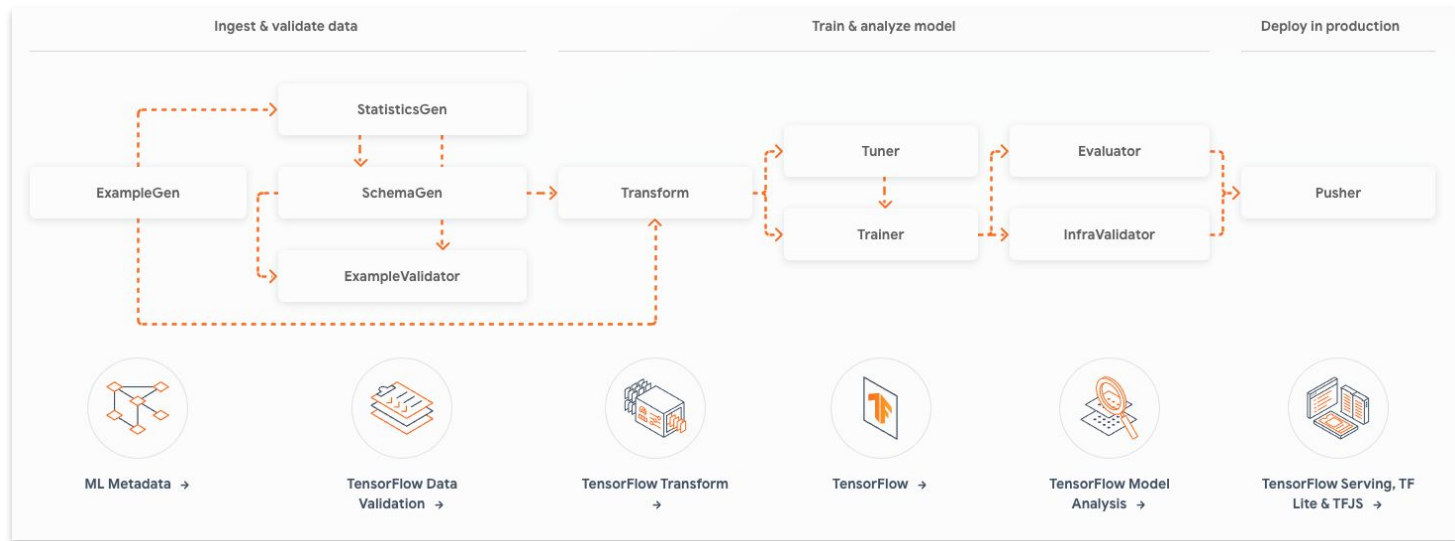

TensorFlow **Extended**
(TFX)

End-to-end
Platforms

Google's TensorFlow **eXtended** (TFX)

AWS SageMaker

SageMaker Ground Truth
Build / Manage training data sets

Amazon SageMaker Studio
IDE for machine learning

SageMaker Autopilot
Automatically build and train models

SageMaker Model Monitor
Auto-detect concept drift

Notebooks
One-click notebooks with
elastic compute

Experiments
Capture, organize, search
every step

SageMaker Neo
Train once, deploy anywhere

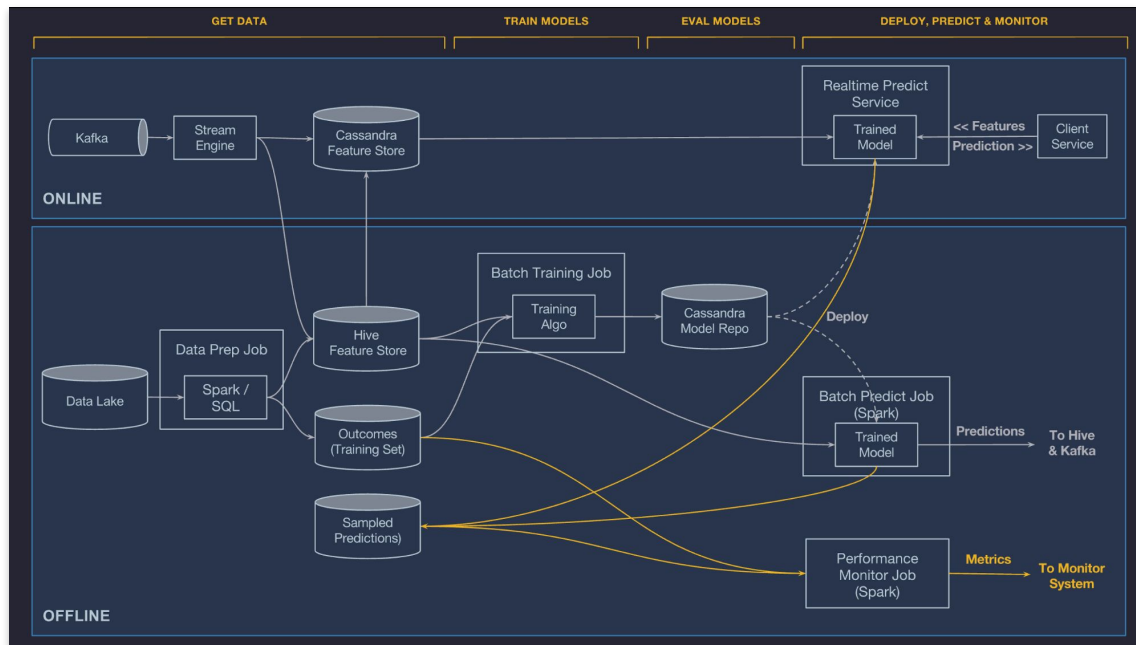

AWS Marketplace
Pre-built algorithms
and models

Debugger
Debug and profile
training runs

Amazon Augmented AI
Add human review of predictions

Auto Model Tuning
One-click hyperparameter
optimization

Über Michelangelo

More Company-centered MLOps Tools

Airbnb **Bighead**

Netflix **Metaflow**

Lyft **Flyte**

Why these companies build **MLOps** tools?

- **No consistency** between ML Workflows

Why these companies build **MLOps** tools?

- **No consistency** between ML Workflows
- New teams **struggle to begin** using ML

Why these companies build **MLOps** tools?

- No consistency between ML Workflows
- New teams **struggle to begin** using ML
- **Wide variety of ML use-cases** across the company

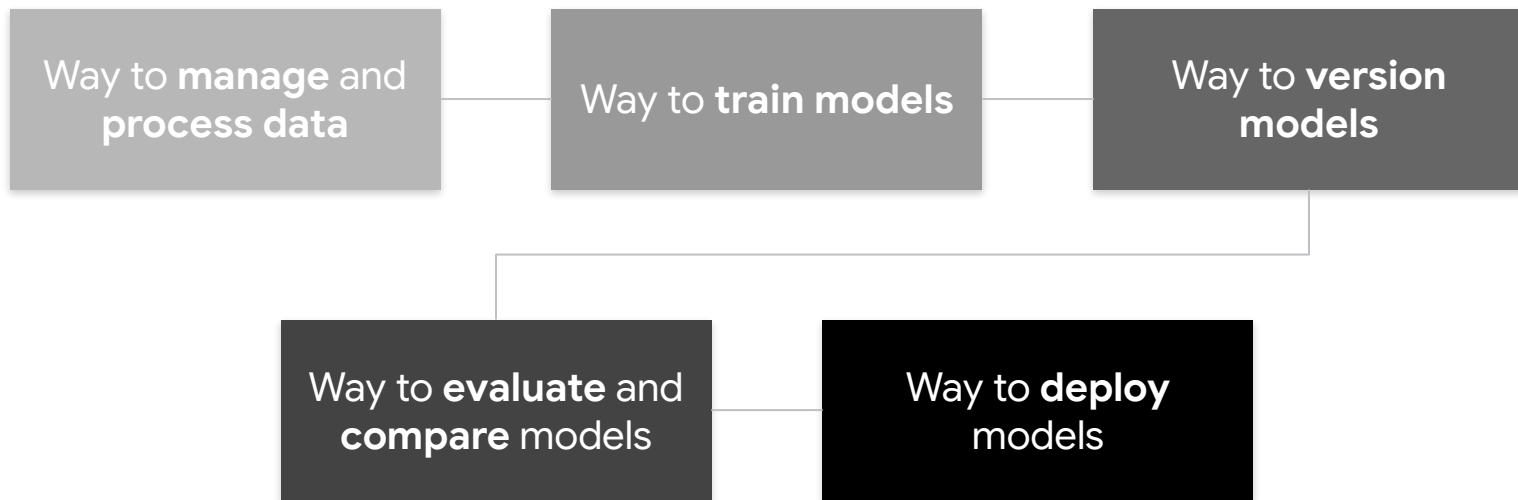

Why these companies build **MLOps** tools?

- **No consistency** between ML Workflows
- New teams **struggle to begin** using ML
- **Wide variety of ML use-cases** across the company
- Existing ML **workflows are slow**, fragmented, and brittle

Why these companies build **MLOps** tools?

- **No consistency** between ML Workflows
- New teams **struggle to begin** using ML
- **Wide variety of ML use-cases** across the company
- Existing ML **workflows are slow**, fragmented, and brittle
- **Build and forget** ML as a linear process

Basic features of MLOps tool

Collaboration

Academia

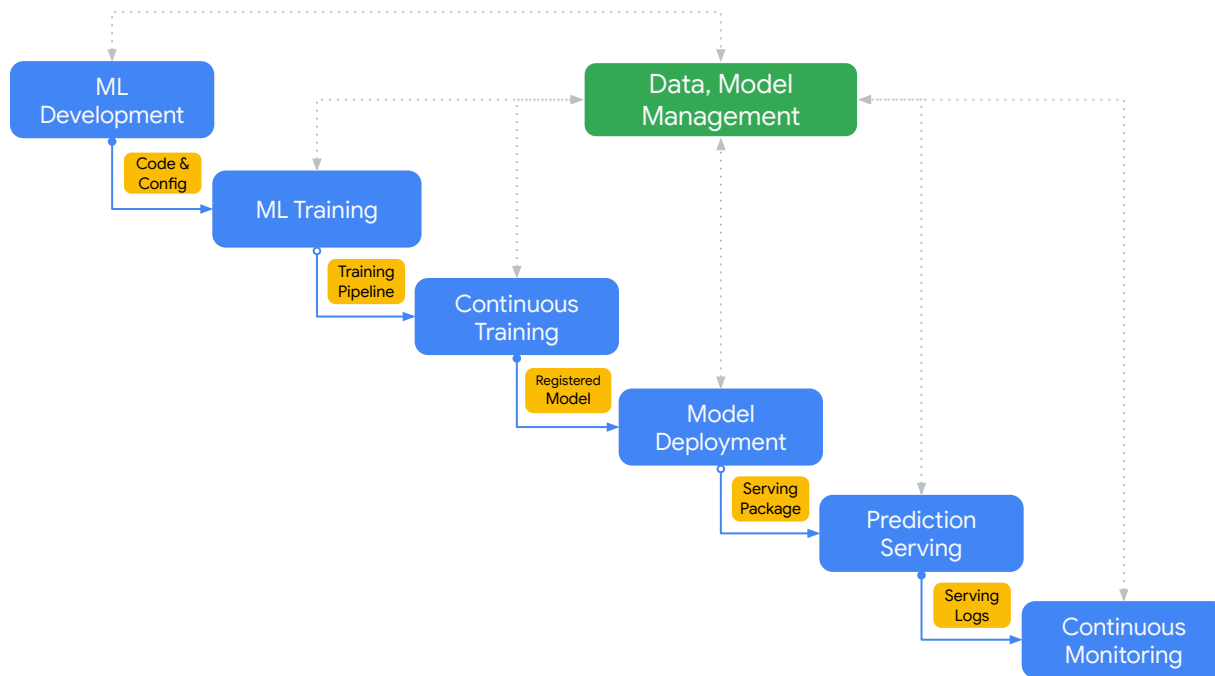

Industry

Dr. Lara Suzuki

Dr. Lara Suzuki from Google
where she serves as **Head of
Data and AI Practice** for **Google
Cloud** (AI/Machine Learning,
Smart Analytics and Data
Management)

The MLOps Process

You're **always** doing MLOps,
so make sure you do it well.
