

In this forum we would like you to read and explore a real world case study of Federated Learning from Google. You can find the article here:

<https://ai.googleblog.com/2017/04/federated-learning-collaborative.html>

- How do you feel about this feature? Do you think it is useful? Exciting?
- What are some other products you have that you wish used federated learning to improve themselves?
- Do you think it is a privacy violation to share your model updates to the cloud? Do you think this solves the privacy issue by not sending your raw data and just the model updates?
