

First Coding Assignment Solution

We hope you enjoyed your first warm up assignment. We'll be following a similar format throughout the course and will always also provide the solution following the assignment.

For this assignment we expected you to provide the following:

```
SHAPE = [1]
```

```
LOSS = "mean_squared_error"
```

That said, for the `LOSS`, as we will explore later in the course, there are [many loss functions included in TensorFlow](#), and for this example many of them would have also resulted in a good solution.

If you'd like to re-try the assignment, now that you know the solution, follow the link below:
