

# Containers for Scaling ML Deployment

# The Challenge

Software Stacks

Hardware Environments

# The Challenge

## Static website

nginx 1.5 + modsecurity + openssl + bootstrap 2

## User DB

postgresql + pgv8 + v8

## Queue

Redis + redis-sentinel

## Analytics DB

hadoop + hive + thrift + OpenJDK

## Background workers

Python 3.0 + celery + pyredis + libcurl + ffmpeg + libopencv + nodejs + phantomjs

## Web frontend

Ruby + Rails + sass + Unicorn

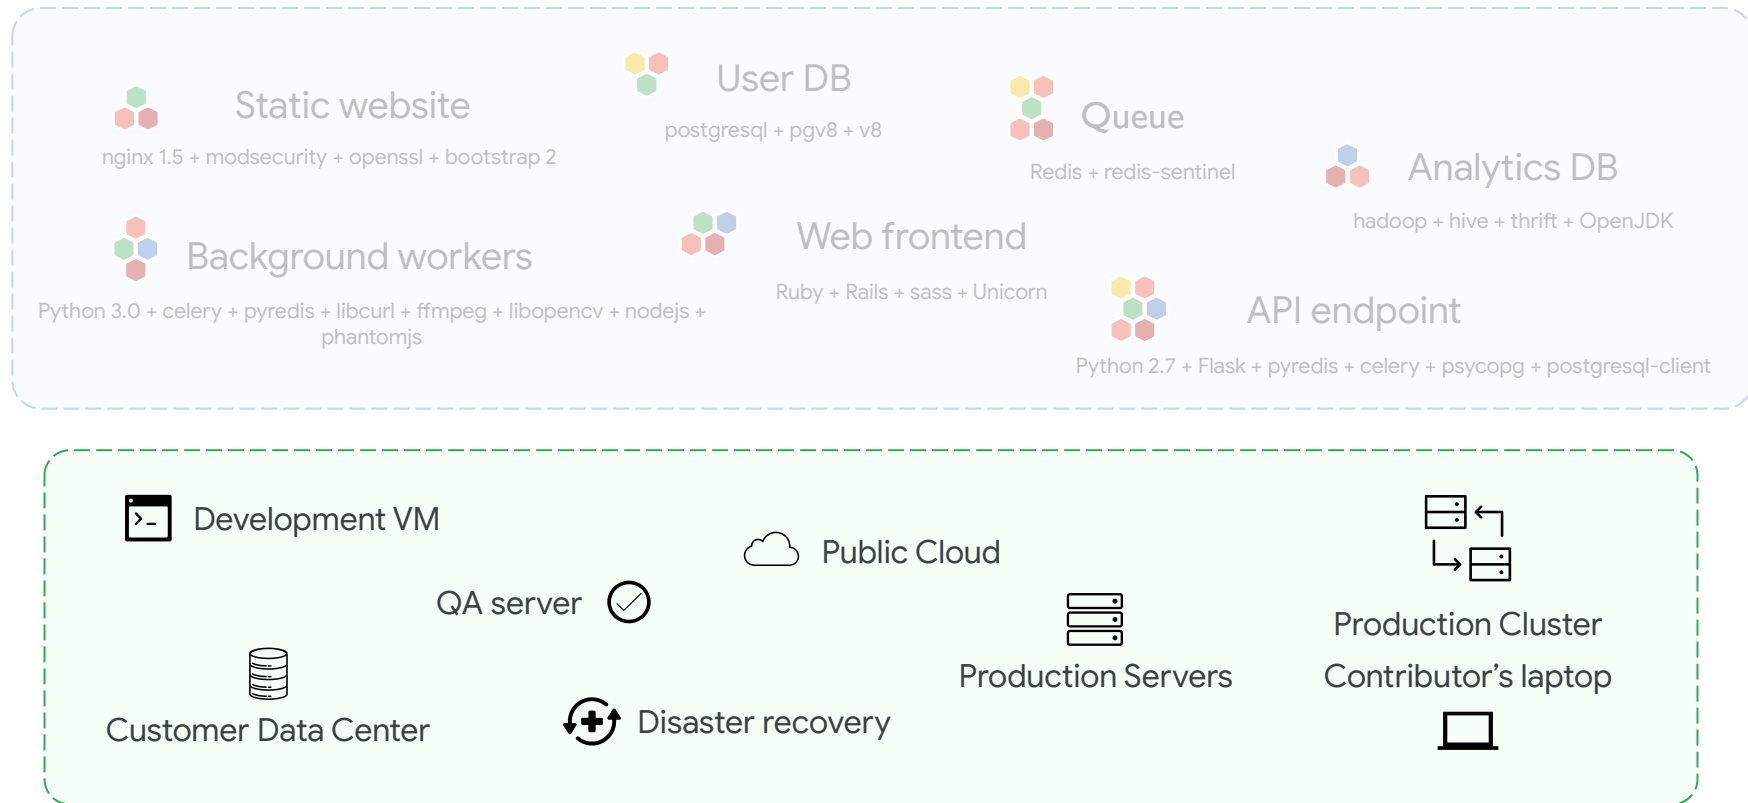

## API endpoint

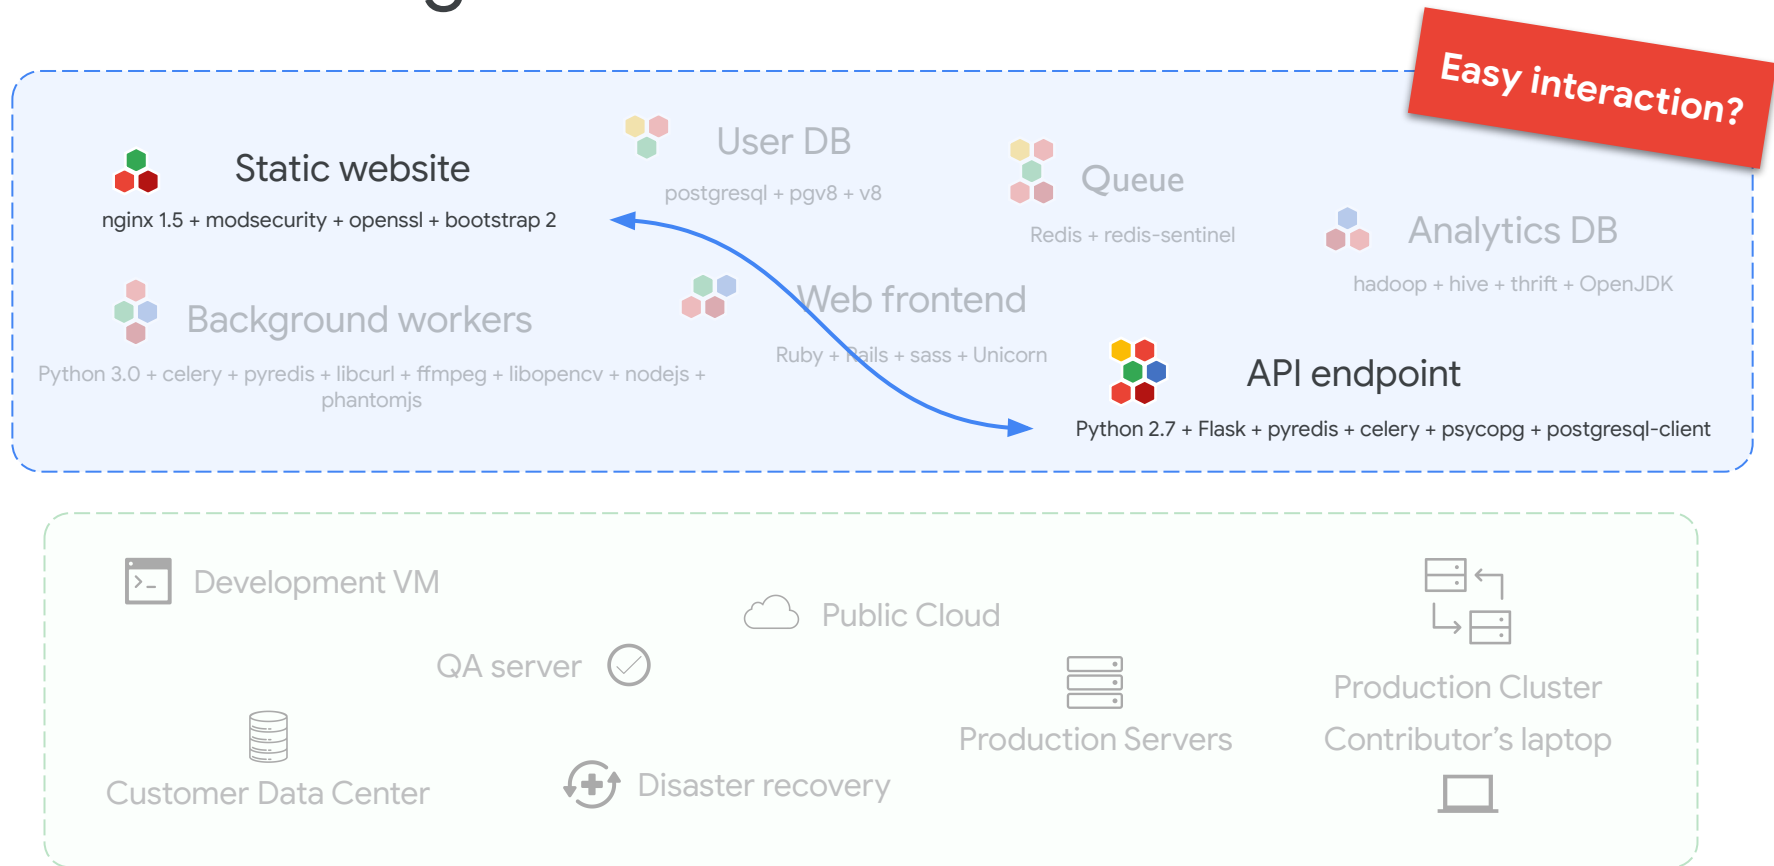

Python 2.7 + Flask + pyredis + celery + pycopg + postgresql-client

## Hardware Environments

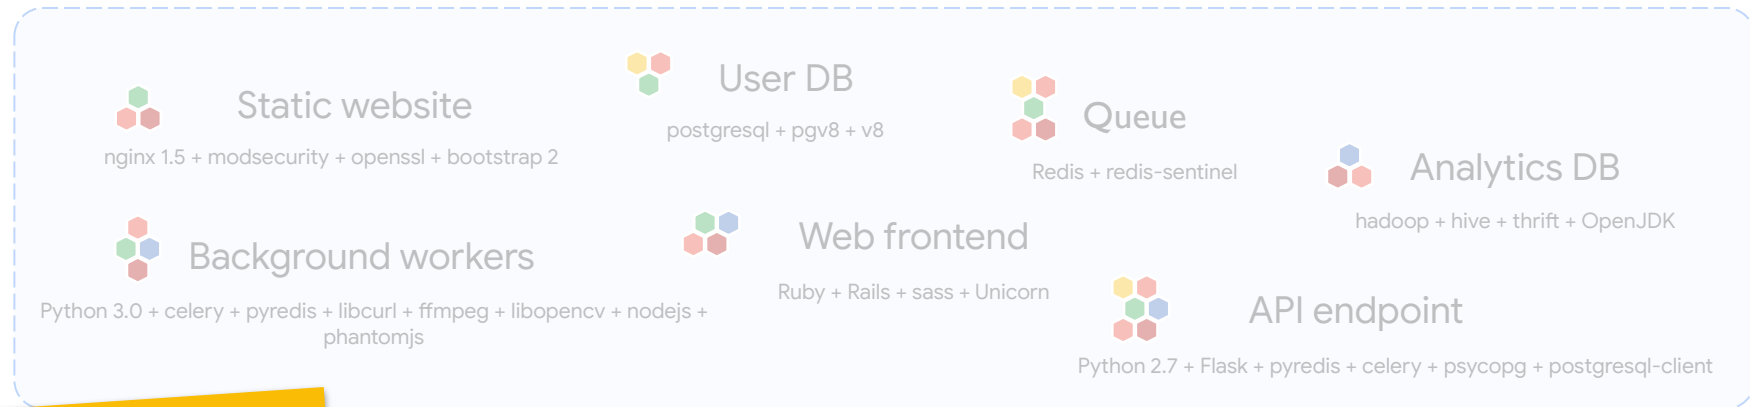

# The Challenge

# The Challenge

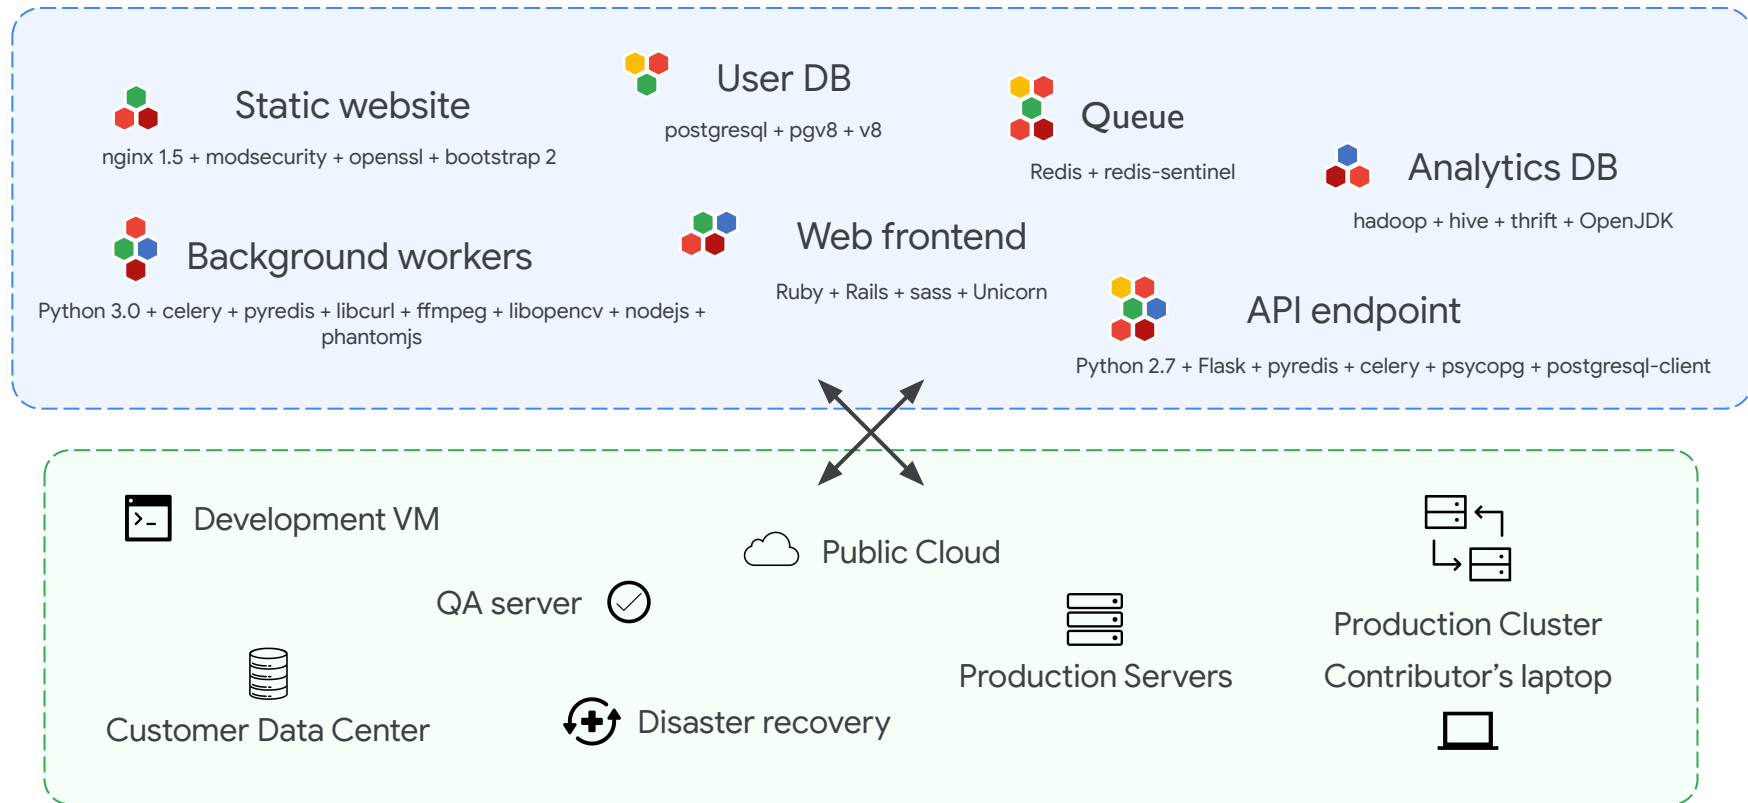

# The Challenge

Easy migration?

# The Challenge

Goods

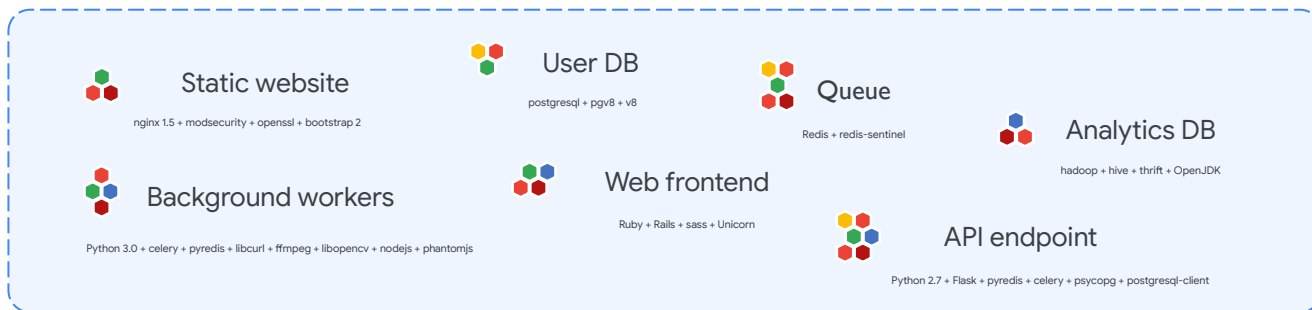

Easy exchange?

- Lightweight, open, secure platform

- Lightweight, open, secure platform
- **Simplify building, shipping, running apps**

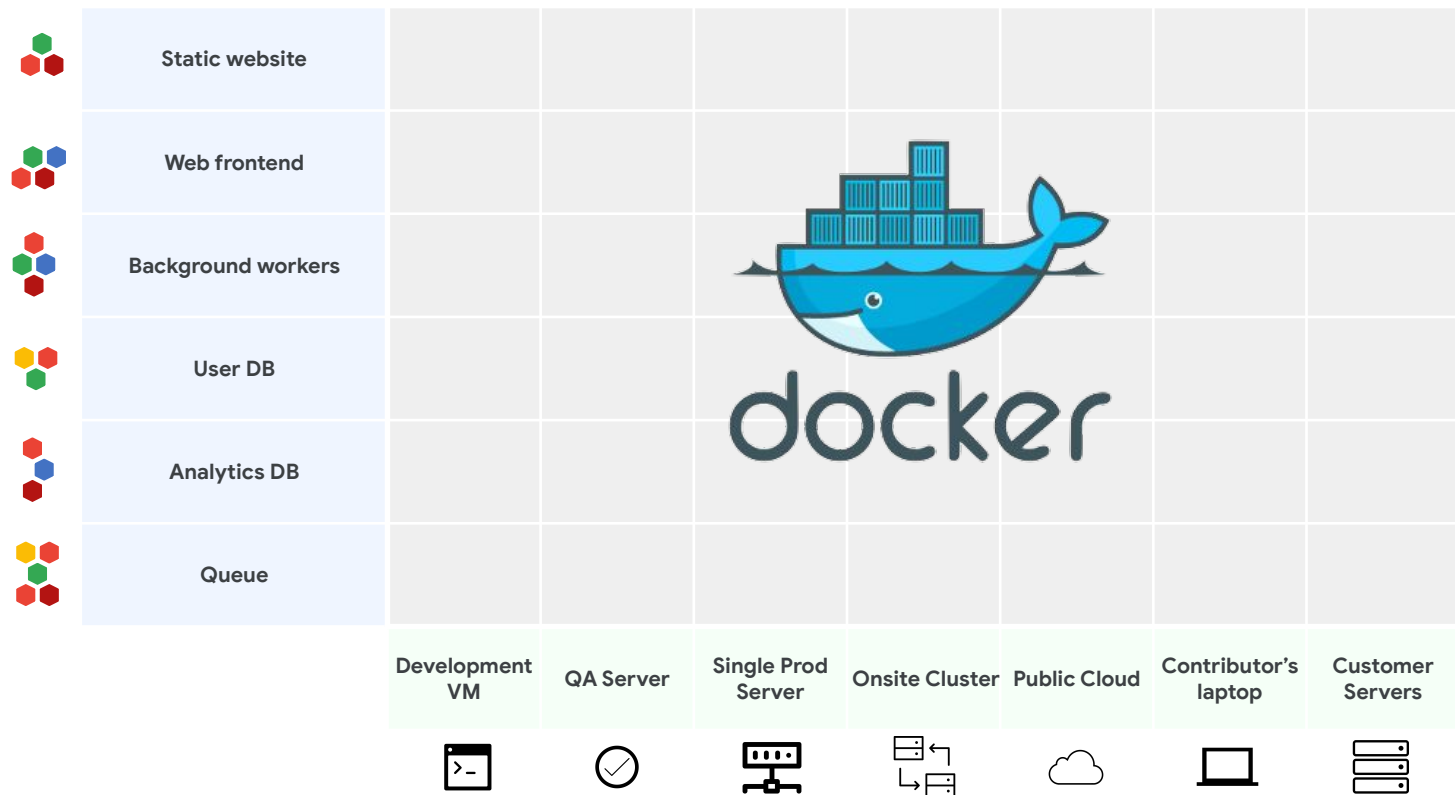

- Lightweight, open, secure platform
- Simplify building, shipping, running apps
- **Runs natively on Linux or Windows Server**

- Lightweight, open, secure platform
- Simplify building, shipping, running apps
- Runs natively on Linux or Windows Server
- **Supports development & server environments**

# The Role of Images and Containers

**Example:**

Ubuntu + Node.js  
and Application Code

**Container:**

Created via image, runs application

# The Role of Images and Containers

**Example:**

Ubuntu + Node.js  
and Application Code

**Container:**

Created via image, runs application

Analyst

## Dana the Developer

- **Worries about what's "inside" the container**
  - code
  - libraries
  - package manager
  - apps
  - Data
- All Linux servers look the same

Software  
Engineer

### Dana the Developer

- **Worries about what's "inside" the container**
  - code
  - libraries
  - package manager
  - apps
  - data
- All Linux servers look the same

Software Engineer

DevOps

### Oscar the Ops Guy

- **Worries about what's "outside" the container**
  - logging
  - remote access
  - monitoring
  - network config
- All containers start, stop, copy, attach, migrate, etc. the same way
