

Thinking about loss...

A way to measure your accuracy

Laurence Moroney, Google

Matching X to Y

$$X = \{-1, 0, 1, 2, 3, 4\}$$

$$Y = \{-3, -1, 1, 3, 5, 7\}$$

Make a guess!

$$Y = 3X - 1$$

$$X = \{ -1, 0, 1, 2, 3, 4 \}$$

$$Y = \{ -4, -1, 2, 5, 8, 11 \}$$

How good is the
guess?

$$Y = 3X - 1$$

$$X = \{ -1, 0, 1, 2, 3, 4 \}$$

$$\text{My } Y = \{ -4, -1, 2, 5, 8, 11 \}$$

$$\text{Real } Y = \{ -3, -1, 1, 3, 5, 7 \}$$

Let's measure it!

Let's measure it!

Let's measure it!

Let's measure it!

Houston, we have a
problem!

What if we **square²**
them?

Total that (Σ) and take
the square root $\sqrt{\quad}$

$$\text{sqrt}(1 + 1 + 4 + 9 + 16)$$

$$= \text{sqrt}(31)$$

$$= 5.57$$

Make another guess!

$$Y = 2X - 2$$

$$X = \{-1, 0, 1, 2, 3, 4\}$$

$$\text{My } Y = \{-4, -2, 0, 2, 4, 6\}$$

$$\text{Real } Y = \{-3, -1, 1, 3, 5, 7\}$$

$$\text{Diff}^2 = \{1, 1, 1, 1, 1\}$$

Get the same
difference, repeat the
same process.

$$\text{sqrt}(1 + 1 + 1 + 1 + 1)$$

$$= \text{sqrt}(5)$$

$$= 2.23$$

Make another guess!

$$Y = 2X - 1$$

$$X = \{-1, 0, 1, 2, 3, 4\}$$

$$\text{My } Y = \{-3, -1, 1, 3, 5, 7\}$$

$$\text{Real } Y = \{-3, -1, 1, 3, 5, 7\}$$

$$\text{Diff}^2 = \{0, 0, 0, 0, 0\}$$

Your turn!
