Now that you've explored CI/CD, it's time to explore a case study about deploying CI/CD in the real world. In the document below you will explore a case study of using tinyML to monitor power lines with the RAM-1 device. After you finish reading the case study please reflect on the following prompts in the discussion forum below:

- What particular CI/CD challenges would you expect to have using the device?
- What features does the device have that would minimize those issues?
